dVault™ Collection Boxes

dVault™ **Private Delivery Boxes** provide intelligent, secure delivery of packages and mail for the age of the Internet. With the dVault™ Collection Vaults, the carrier can deliver a package without signature, and the package remains secure and protected from elements and tampering until the owner can retrieve the delivery. The dVault™ information system software provides electronic or email notification of package delivery. Combined, the dVault™ product line offers a unique solution for homeowners, commercial buildings and governmental agencies seeking a smart parcel bin.

The **dVault™ Information Systems (DIS)** provide automatic date and time-stamp delivery notification, electronic signature/release, tracking and numerous reporting functions. Our patented systems provide merchants, shippers and consumers with the information they want and need utilizing capital equipment and information infrastructures already in place.

How it works:
Each unit (optional) may have a dVault™ ID Plate attached (see below). This ID Plate is unique to each unit and its location. When a delivery is made, the delivery agent scans the deliverable item, then scans the ID Plate and deposits the deliverable item into the delivery vault. dVault's software does the rest. The owner can register their unit for a nominal one-time fee to take advantage of the dVault™ Information System.
